

UNIT- 2 STRUCTURE DESIGN AND DEATAILED DESIGN

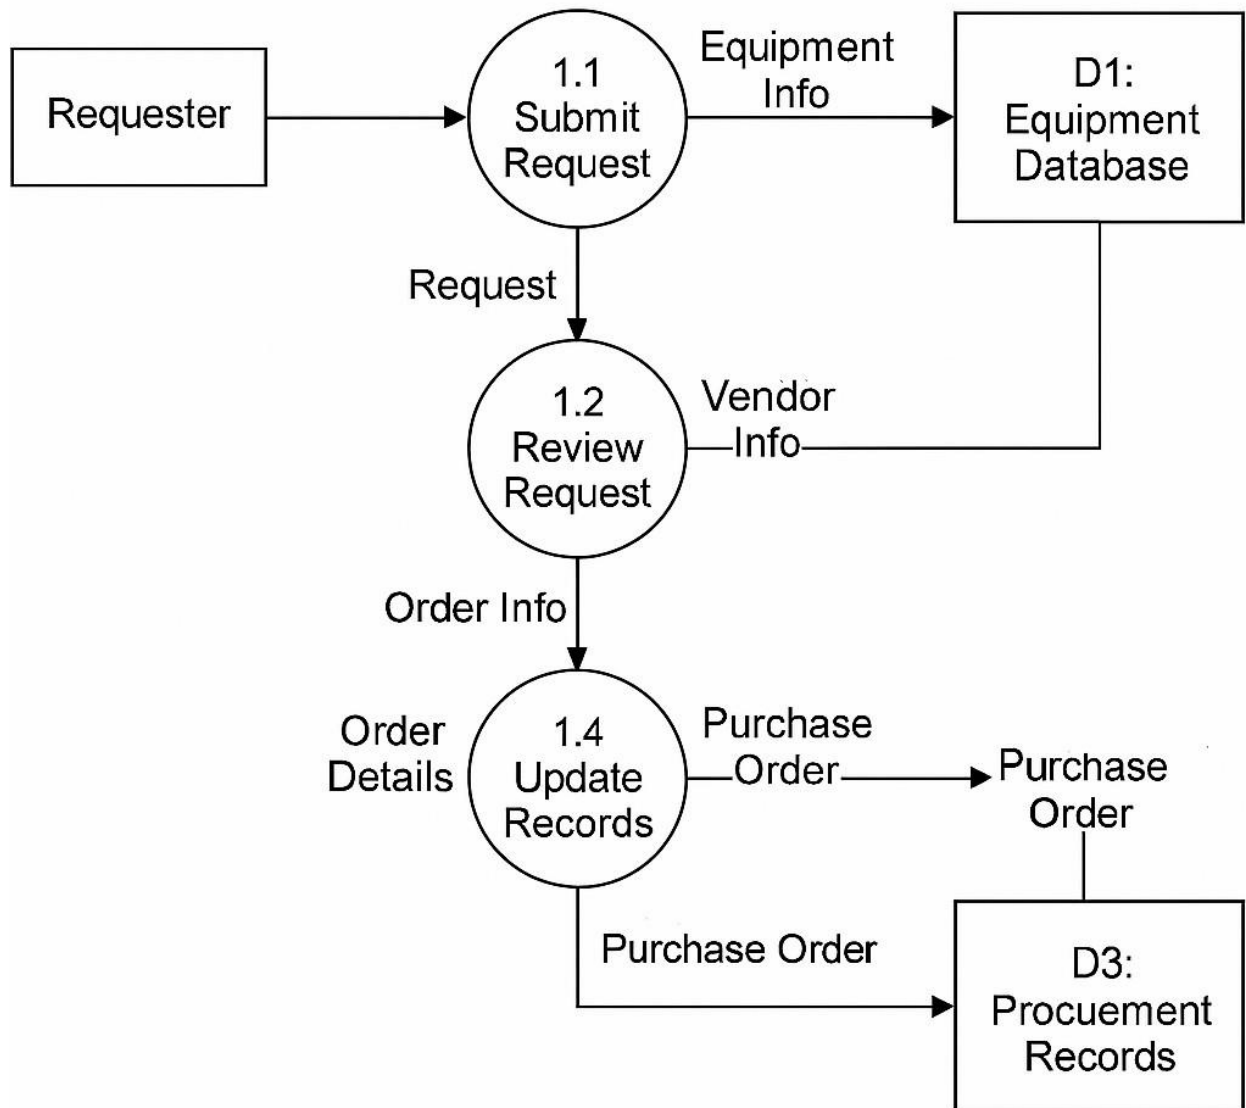

EXAMPLES FOR DFD & CONTEXT DIAGRAM

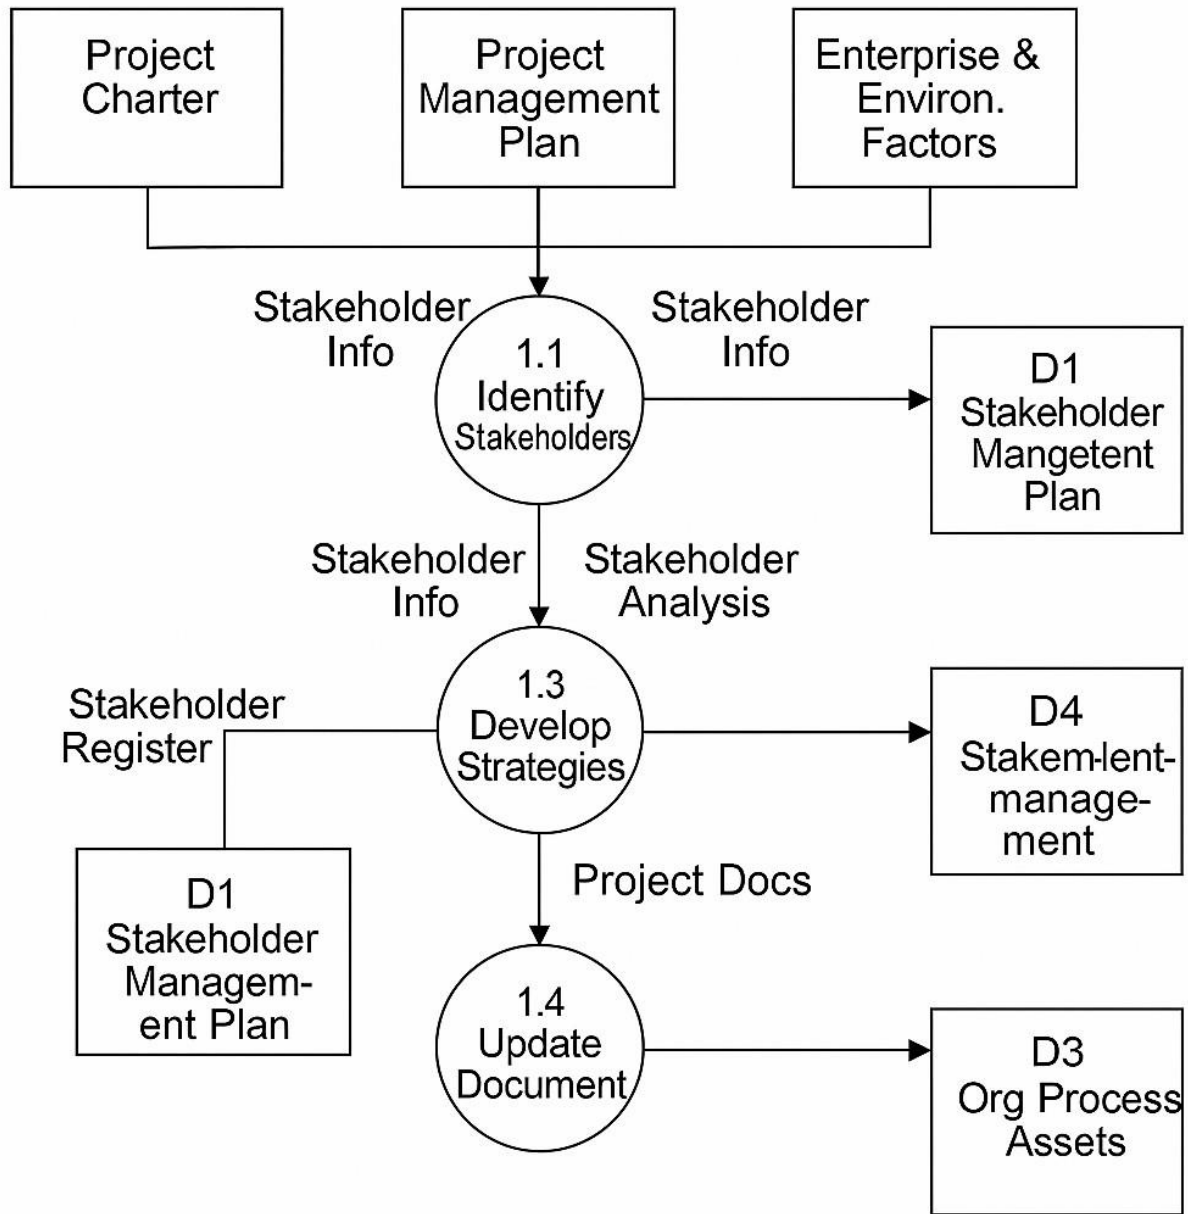

CONTEXT DIAGRAM FOR SUPERMARKET SCHEME

Equipment Procurement

DFD FOR EQUIPMENT PROCUREMENT

DFD FOR PLAN STAKEHOLDER MANAGEMENT

PRACTICE:

Question 1

(i) You are designing a DFD for an **online food delivery system**. When a customer places an order, the system checks restaurant availability, processes the payment, and assigns a delivery agent. Draw a DFD showing all major processes, data stores, and data flows.

(ii) A restaurant partners with a delivery platform to send food to customers. Once an order is confirmed, the delivery agent must pick up and deliver the food. Consider the following Entities: (*Customer, Restaurant, Delivery Agent, System Admin*). Draw the Context Diagram.

Question 2

(i) You are designing a DFD for a **library management system**. When a user borrows a book, the system checks availability, updates records, and sets a return date. Draw a DFD showing all major processes, data stores, and data flows.

(ii) A library sends overdue reminders to users. Consider the following Entities: (*Member, Librarian, Notification System, System Administrator*). Draw the Context Diagram.

Question 3

(i) You are designing a DFD for an **online movie ticket booking system**. When a user selects seats, the system checks seat availability, processes payment, and issues tickets. Draw a DFD showing all major processes, data stores, and data flows.

(ii) A cinema collaborates with booking platforms to issue tickets. Consider the following Entities: (*Customer, Theatre, Payment Gateway, System Admin*). Draw the Context Diagram.

Question 4

(i) You are designing a DFD for a **hospital appointment system**. When a patient books an appointment, the system checks doctor availability, schedules the appointment, and sends confirmation. Draw a DFD showing all major processes, data stores, and data flows.

(ii) A hospital coordinates appointments between doctors and patients. Consider the following Entities: (*Patient, Doctor, Receptionist, System Administrator*). Draw the Context Diagram.

Question 5

(i) You are designing a DFD for an **e-learning platform**. When a student enrolls in a course, the system verifies payment, grants access to content, and tracks progress. Draw a DFD showing all major processes, data stores, and data flows.

(ii) An instructor uploads course materials for students. Consider the following Entities: (*Student, Instructor, Content Manager, System Admin*). Draw the Context Diagram.

Question 6

(i) You are designing a DFD for a **bank ATM system**. When a user withdraws cash, the system verifies the PIN, checks account balance, and dispenses cash. Draw a DFD showing all major processes, data stores, and data flows.

(ii) A bank monitors ATM transactions. Consider the following Entities: (*Customer, Bank Server, ATM Machine, System Administrator*). Draw the Context Diagram.
